Molecular and Dietary Risk Factors?

After Moore
981

PUFA’s, poly-unsaturated fatty acids; IGF-IR, insulin like growth factor I receptor; IR, insulin receptor; SHR, steroid hormone receptor; , enhancing stimulus; , inhibitory effect.
Aims and Scope

The aim of the Asian Pacific Organization for Cancer Prevention and Control is to promote an increased awareness in all areas of cancer prevention/control and to stimulate research and practical intervention approaches. Its official journal, the APJCP, is indexed on PubMed and Science Citation Index Expanded. The scope is wide-ranging, including descriptive, analytical and molecular epidemiology, experimental and clinical histopathology/biology of preneoplasias and early neoplasias, assessment of risk and beneficial factors, experimental and clinical trials of primary preventive measures/agents, screening approaches and secondary prevention, clinical epidemiology and all aspects of cancer prevention education. All of the papers published are freely available as pdf files downloadable from www.apocp.org or obtainable from the first authors.

Curcumin: From Food Spice to Cancer Prevention  Ademola A Oyagbemi, Adebowale B Saba, Azeez O Ibraheem  (ademolaoyagbemi@yahoo.com)

Mini-Abstract
Curcumin is an orange-yellow component of turmeric (Curcuma longa), a spice often found in curry powder. It is known to have anti-inflammatory, anti-oxidant, and anticarcinogenic potential. It is a potent inhibitor of cytochrome P450 with capacity to simultaneously induce detoxifying enzymes such as glutathione S-transferase. Curcumin is a potent inhibitor of cyclooxygenase-2, lipoxygenase, ornithine decarboxylase (ODC), nuclear factor-kB, c-Jun N-terminal kinase and protein kinase C and may play a vital role against pathological conditions such as cancer, atherosclerosis, and neurodegenerative diseases.  
Asian Pacific J Cancer Prev, 10, 963-967

Cervical Cancer and HPV Vaccines in Developing Countries  Mojgan Karimi Zarchi, Nadereh Behtash, Zohreh Chiti, Saeed Kargar  (drkarimi2001@yahoo.com)

Mini-Abstract
Prevention of HPV infection is the main purpose of cervical cancer prevention and vaccination is expected to reduce up to 70% of related cervical cancer and prevent precancerous and cancerous lesions of the genitalia. However, screening programs are still essential for those who have already been exposed to the high risk forms of the virus and educational and information programs continue to play important roles to increase the success rate of screening, by whichever of the modalities is most appropriate for the local conditions.  
Asian Pacific J Cancer Prev, 10, 969-974

Toxicology of Engineered Nanomaterials - A Review of Carcinogenic Potential  Hiroyuki Tsuda, Jiegou Xu, Yuta Sakai, Mitsuru Futakuchi, Katsumi Fukamachi  (htsuda@med.nagoya-cu.ac.jp)

Mini-Abstract
An overview of currently available carcinogenicity risk evaluation results of nanotechnology materials raises serious questions as to their safety. NP sized titanium dioxide (nTiO2) and carbon black (nCB) are carcinogenic to the lung of female rats, and the tumors preferentially include squamous cell morphology. Carbon nanotubes (CNT) induce mesotheliomas when applied intraperitoneally in rats and mice. Data for Fullerenes are insufficient to evaluate carcinogenic risk. Sub-chronic toxicity data indicate that, in general, NPs form aggregates and agglomerates and cause foreign body reactions at their applied sites with inflammatory cell, including macrophage, infiltration. These findings are similar to the biological effects of asbestos, a potent carcinogen, and indicate that careful assessment of NPs is indispensable.  
Asian Pacific J Cancer Prev, 10, 975-980

Diverse Influences of Dietary Factors on Cancer in Asia  Malcolm A Moore  (apocpcontrol@yahoo.com)

Mini-Abstract
What we eat or do not eat is exceedingly important in determining what cancers or other chronic disease we may suffer from. Carcinogens may be integral contaminants of the diet, like nitrosamines in some situations and aflatoxins. Examples of co-carcinogenic agents may include grit in bread products, salt in pickles or betel in chewing quids. Dietary insufficiencies, for example of zinc, may also act to increase sensitivity to genetic damage. In addition we have dietary fibre which can decrease carcinogen exposure through accelerating passage of faeces through the gut. Natural anti-inflammatory agents like N-3 fatty acids in fish offer another example of preventive factors in the diet. Individual dietary components, like isoflavones in soy products, can interfere with hormone function to exert a beneficial action.  
Asian Pacific J Cancer Prev, 10, 981-986
Chronic Disease Prevention Research in Central Asia, the Urals, Siberia and Mongolia - Past, Present and Future

Malcolm A Moore, Gulmira Aitmurzaeva, Zhetkergen A Arsykulov, Maratbek Bozgunchiev, Saule Alkeeva Dikanbayeva, Guvnara Igininov, Nurbek Igininov, Saginbek Igininov, Sholpan Karzhaubayeva, Dondov Oyunchimeg, Trendsuren Oyunsuren, Mashhura Soiopova, Tumubaatar

Mini-Abstract

Central Asia, the Urals, Siberia and Mongolia cover an immense section of Asia and although relatively sparsely populated the total inhabitants number well in excess of 100 million. Here we focus on published work from the individual countries, as assessed by PubMed searches using the country name with cancer, cardiovascular, metabolic syndrome and diabetes as search terms, with an especial focus on epidemiology, environmental carcinogenicity and screening.

Asian Pacific J Cancer Prev, 10, 987-996

Hepatitis B Testing and Vaccination in Immigrants Attending English as a Second Language Classes in British Columbia, Canada

T Gregory Hislop, Chris D Bajdik, Chong Teh, Wendy Lam, Shing-Ping Tu, Yutaka Yasui, Roshan Bastani, Vicky M Taylor

Mini-Abstract

Health care practitioners need to be cognizant of HBV testing, and possibly vaccination, in some of their patients, including immigrants from countries with endemic HBV infection. Infected persons need to be identified by blood testing in order receive necessary care to prevent or delay the onset of liver disease as well as to adopt appropriate behaviours to reduce the risk of transmission to others. Close contacts of infected persons also require HBV testing and subsequent vaccination (if not infected) or medical management (if infected)

Asian Pacific J Cancer Prev, 10, 997-1002

Impact of Nutritional Status on the Quality of Life of Advanced Cancer Patients in Hospice Home Care

Negar Shahmoradi, Mirnalini Kandiah, Loh Su Peng

Mini-Abstract

This cross-sectional study examined the association between global quality of life and its various subscales with nutritional status among 61 (33 females and 28 males) advanced cancer patients cared for by selected hospices in peninsular Malaysia. The findings suggest that there is a need for a comprehensive nutritional intervention for improving nutritional status and quality of life in terminally ill cancer patients under hospice care.

Asian Pacific J Cancer Prev, 10, 1003-1010

Cyclooxygenase-2 Expression in Cervical Squamous Cell Carcinoma: the Significance of Expression in Neoplastic Cells within the Lymphovascular Space

Jongkolnee Settakorn, Surapan Khunamornpong, Kornkanok Sukpan, Jatupol Srisomboon, Sumalee Siriaungkul

Mini-Abstract

In this study, we evaluated whether COX-2 expression of neoplastic cells within lymphovascular spaces (tumor emboli) would provide additional prognostic information. Expression of COX-2 in tumor emboli (LV-COX-2 expression) was identified in 61 cases (40.7%). LV-COX-2 expression was associated with high LVSI count (p<0.001) and had a marginal association with tumor COX-2 expression (p=0.050) and lymph node metastasis (p=0.063). Evaluation of COX-2 expression in tumor emboli may provide additional prognostic value for lymph node metastasis in cervical squamous cell carcinomas.

Asian Pacific J Cancer Prev, 10, 1011-1014
Risk Factors for Prostate Cancer in Universiti Kebangsaan Malaysia Medical Centre: A Case-Control Study  
Mohd Nizam Subahir, Shamsul Azhar Shah, Zulkifli Md Zainuddin  
(Shamsulazharshah@yahoo.com)

Mini-Abstract
A study was conducted in Malaysia to recognize the risk factors for prostate cancer patients who came for treatment at Universiti Kebangsaan Malaysia Medical Centre (UKMMC). Most of the cases were above 70 years old. The majority were Chinese (50.0%) followed by Malay (46.4%) and Indian (3.6%). Multivariate analysis showed cases were more likely to have a first-degree relative with a history of cancer, to have been exposed to pesticides and consumed more meat. Significantly reduced risks of prostate cancer were noted among those consuming more vegetables, more tomatoes and those who had frequent sexual intercourse.

Serum Granulocyte Macrophage-Colony Stimulating Factor: a Tumor Marker in Colorectal Carcinoma?  
Umut Demirci, Ugur Coskun, Banu Sancak, Banu Ozturk, Burak Bahar, Mustafa Benekli, Suleyman Buyukberber  
(ugurcos@hotmail.com)

Mini-Abstract
The aim of the present study was to determine the effect of granulocyte macrophage colony-stimulating factor and carcinoembryogenic antigen levels in predicting survival. Plasma levels of GM-CSF were measured in 51 patients with previously untreated colorectal cancer patients and 21 healthy adults as normal controls. We found significantly elevated GM-CSF but the results suggested that serum GM-CSF may not be useful for clinical information in prognosis as a tumor marker in colorectal cancer.

Changing Trends in Incidence of Ovarian Cancer - the Indian Scenario  
Nandagudi Srinivasa Murthy, S Shalini, G Suman, Srekantaiah Pruthvish, Aleyamma Mathew  
(nsmurthy44@yahoo.com)

Mini-Abstract
The present communication reports the trends in the incidence rate of ovarian cancer for Indian women. During the period 2001-06, the age-standardized incidence rates (ASR) for ovarian cancer varied from 0.9 to 8.4 per 100,000 person years amongst various registries. The highest incidence was noted in Pune & Delhi registries. The Age Specific Incidence Rate (ASIR) for ovarian cancer revealed that the disease increases from 35 years of age and reaches a peak between the ages 55-64. The trend analysis by period showed an increasing trend in the incidence rate of ovarian cancer in most of the registries, with a mean annual percentage increase in ASR ranged from 0.7% to 2.4%.

Punarnavine Induces Apoptosis in B16F-10 Melanoma Cells by Inhibiting NF-kB Signaling  
Kanjoormana Aryan Manu, Girija Kuttan  
(amalacancerresearch@gmail.com)

Mini-Abstract
The objective of this study was to assess the effect of Punarnavine, an alkaloid isolated from Boerhaavia diffusa, on apoptosis in B16F-10 melanoma cells. Treatment of B16F-10 melanoma cells with nontoxic concentrations of Punarnavine resulted in the presence of apoptotic bodies and DNA fragmentation in a dose dependent manner. All the results demonstrate that Punarnavine induces apoptosis via activation of p53 induced caspase-3 mediated pro-apoptotic signaling and suppression of NF-kB induced Bcl-2 mediated survival signaling.
Overview of Chronic Myeloid Leukemia Patients in Pakistan in the Pre-Imatanib Era

Saad Z Usmani, Shakeeb A Yunus, Yasser Jamal  
(saadzu@yahoo.com)

Mini-Abstract

The objective was to study the patient characteristics of patients diagnosed with chronic myelogenous leukemia (CML) at a tertiary care cancer hospital in Pakistan. A total of 461 CML patient charts were reviewed. The mean and median ages at presentation were much younger than in the prior reports in the western literature with a quicker progression of disease. Tyrosine kinase inhibitors will likely have more impact on the lifespan of CML patients in Pakistan due to younger age at diagnosis.  

Asian Pacific J Cancer Prev, 10, 1039-1040

Clinical Outcome of the Ovarian Clear Cell Carcinoma Compared to other Epithelial Ovarian Cancers when Treated with Paclitaxel and Carboplatin

Daranee Sirichaisutdhikorn, Prapaporn Suprasert, Surapan Khunamornpong  
(psuprase@mail.med.cmu.ac.th)

Mini-Abstract

Our aim was to evaluate the progression free survival (PFS) of ovarian clear cell carcinoma (OCCC) patients compared to other epithelial histology patients when treated with surgery followed by carboplatin and paclitaxel (PT) regimen. Patients were commonly younger and presented in earlier stages than non-clear cell ovarian cancer patients. In early stages, clear cell ovarian cancer patients had similar outcomes to other epithelial ovarian histology patients, whereas the outcome was very poor in advanced stages.  

Asian Pacific J Cancer Prev, 10, 1041-1045

Women’s Awareness, Knowledge and Perceived Magnitude Regarding Common Female Cancers in Yangon, Myanmar

Myo Myo Mon, Mon Mon, Kyu Kyu Than  
(mmyomon@gmail.com)

Mini-Abstract

A community-based, cross-sectional study was conducted with the objectives of assessing the women’s awareness and knowledge on common female cancers and estimating the perceived magnitude and survival of cancer breast and cervix. Almost all of them said that both diseases can be cured at early stage. Cancer breast, uterus and cervix were mentioned as the most common female cancers according to their perceived magnitude. Although cervical and breast cancer were perceived as common female cancers, health education activities regarding risk factors and early warning signs of these cancer still need to be promoted.  

Asian Pacific J Cancer Prev, 10, 1047-1050

Vinorelbine in Combination with Carboplatin followed by Single-agent Consolidation Therapy for Unresectable Localized or Metastatic Non-small-cell Lung Carcinomas

Suleyman Alici, Ugur Coskun, Necati Alkis, Alper Sevinc, Faysal Dane, Mahmut Gumus, Metin Ozkan, Ali Osman Kaya, Gokhan Celenkoglu, Suleyman Buyukberber, Mustafa Altunbas, Mustafa Benekli; for the Anatolian Society of Medical Oncology  
(suleymanalici@yahoo.com)

Mini-Abstract

Despite the low dose of vinorelbine (25mg/m2 i.v. on day 1 and only 60 mg/m2 oral on day 8, every 3 weeks) achieved during the study, the response rate of 34.7%, the disease control of 70.8% and the 10 months median overall survival with tolerable toxicity profile, confirmed that this combination, offers an active and safe regimen for patients with advanced non-small-cell lung cancer.  

Asian Pacific J Cancer Prev, 10, 1051-1055
**XRCC1399 and hOGG1326 Polymorphisms and Frequencies of Micronuclei, Comet and Chromosomal Aberrations among Tobacco Chewers: A South Indian Population Study**

Sudha Sellappa, Shibily Prathyumnan, Shyn Joseph, Kripa S Keyan, Mythili Balakrishnan, K Sasikala

Mini-Abstract

In the present study, we explored the relationship between polymorphisms in the DNA repair gene XRCC1399 and hOGG1326 genotypes using polymerase chain reaction-restriction fragment length polymorphism and risk of cancer development. 156 smokeless tobacco users and 70 controls without significant exposure to mutagens were recruited. There were significant differences in the micronucleus (MN), Comet scores and chromosomal aberrations (CA) between smokeless tobacco users and control subjects by Student’s t-test (P<0.05). These findings provide evidence for the view that polymorphisms in DNA repair genes may modify individual susceptibility to tobacco related cancers.

**Screening of N-ras Gene Mutations in Urothelial Cell Carcinomas of the Urinary Bladder in the Kashmiri Population**

Arshad A Pandith, Zaffar A Shah, Nighat P Khan, Adfar Y Bhat, Saleem M Wani, Mushtaq A Siddiqi

Mini-Abstract

The objective of this study was to assess the frequency of specific-point mutations in N-ras of the RAS gene family in a group of Kashmiri patients with bladder cancer and to observe any association with clinicopathological parameters. Although N-ras gene mutation might be one of the mechanisms underlying oncogenesis of urothelial cancer, it seems to be a relatively rare event in Kasmiris.

**Estrogen Receptor, Progesterone Receptor, HER2/neu, P53 and Ki-67 status of Male Breast Carcinomas in Pakistan**

Shahid Jamal*, Huma Mushtaq, Azhar Mubarik, Tariq Masood Malik

Mini-Abstract

The aim of present study was to assess the status of estrogen and progesterone receptors, HER2/neu, p53 and ki-67 in male breast carcinomas in our institute. The majority of the cases were above 65 years of age. Histologically, the invasive ductal carcinoma was the predominant lesion. The majority of male breast carcinomas in Pakistan are ER and PR positive and demonstrate immunoreactions for prognostic markers. The results point to a relatively aggressive nature of such lesions.

**Neoplasia/dysplasia Surveillance of Oral Lichen Planus in Malaysia: a Preliminary Study using Topography Maps**

Jimie Siew Mei Lim, Sum Pei Tang, Chong Huat Siar

Mini-Abstract

To evaluate the association between clinico-pathological features and HER2 overexpression in breast cancer, a retrospective study conducted in the Department of Surgery, University Malaya Medical Centre. HER2 overexpression was observed in 30.3% of Malaysian female breast cancer patients. This group of patients represents a more aggressive subtype of breast cancer with higher tumour grade, PR negativity and lymphovascular positivity. No significant relationship was established between HER2 overexpression and age, race, lymph node, ER, pathology subtype and stage of disease.
Eight Year Survival among Breast Cancer Malaysian Women from University Kebangsaan Malaysia Medical Centre

Redhwan Ahmed Mohammed Al-Naggar, Zaleha Md Isa, Shamsul Azhar Shah, Md Idris Mohd Nor, Robert Chen, Fuad Ismail, Sami Abdo Radman Al-Dubai

Mini-Abstract

A retrospective study of 472 Malaysian women with breast cancer from the Medical Record Department at Universiti Kebangsaan Malaysia Medical Centre (UKMMC) was performed with survival analysis carried out using the Kaplan-Meier with log-rank test for univariate analysis and Cox-regression for multivariate analysis. Being Chinese and having a family history of cancer are predictors of longer survival among the Malaysian breast cancer women

Breast Carcinoma in Young Women Aged 30 or Less in Northern Pakistan - the Armed Forces Institute of Pathology Experience

Nadira Mamoon, Usman Hassan*, Sajid Mushtaq

Mini-Abstract

The study was carried out to document the occurrence of early onset breast cancer in our population and to assess prognostic variables. Most frequent age group was 26-30 years (78.6%). The most common histological tumour type was invasive ductal carcinoma (88.7%), followed by invasive lobular carcinoma (5.4%). Grade 2 (57.1%), followed by grade 3 (29.8%) were the most frequent. Out of 68 cases in which lymph nodes were included, lymph node metastasis was seen in 55(80.8%). Breast cancer is much commoner in young women in Pakistan as compared to the rest of the world.

Complementary and Alternative Medicine in Cancer Patients - Analysis of Influencing Factors in Turkey

Arzu Tuna Malak, Özgül Karayurt, Emel Demir, Aylin Sami Yümer

Mini-Abstract

This cross-sectional and descriptive study analysed complementary and alternative medicine (CAM) practices of patients with cancer diagnoses and influencing factors. Alternative treatments apply herbal treatments concomitantly such as honey, garlic; balsam apple, iscum album, tar oil and 29.1% of them only use stinging nettle. As a complementary treatment; 60% of patients pray for healing and 16.4% of them have massage regularly. The cancer patients in the study who live in Çanakkale province and in its districts use CAM. CAM practice does not vary by selected sociodemographic characteristics and the hope level.

Anti-tumor Activity of Phyllanthus niruri (a Medicinal Plant) on Chemical-induced Skin Carcinogenesis in Mice

Priyanka Sharma, Jyoti Parmar, Preeti Verma, Priyanka Sharma, PK Goyal

Mini-Abstract

Phyllanthus niruri is a well known medicinal plant which has been used in Ayurvedic medicine as hepatoprotective, antiviral, antibacterial, analgesic, antispasmodic and antidiabetic. The present study was carried out to evaluate the anti-tumor activity of a hydro-alcoholic extract of the whole plant, in 7-9 week old male Swiss albino mice, on the two stage process of skin carcinogenesis induced by a single topical application of 7, 12-dimethylbenz (a)anthracene. The results thus suggest that P. niruri extract exhibits significant anti-tumor activity, which supports the traditional medicinal utilization of this plant.

Screening and Perceived Severity of Cervical Cancer among Women Attending Mahalapye District Hospital, Botswana
Muhammad Hoque, C M Ibekwe, Busi Ntuli-Ngcobo
(Muhammad_Hoque@embanet.com)

Mini-Abstract

The objectives of the study were to describe women's perceived severity to cervical cancer and its associations with socio-demographic characteristics. Most of the women were sure about the severity of cancer as they responded mostly agreeing or strongly agreeing with statements about severity of cervical cancer. It was found that the screening rate is still far too low compared to the national target of greater than 75%. Therefore, despite awareness of the perceived severity of cervical cancer, the reasons why at risk women fail to participate in cervical cancer screening need to be adequately explored. Asian Pacific J Cancer Prev, 10, 1095-1100

Perspectives on Strategies for Establishing Cancer on the Global Health Agenda: Possibilities of Creating Infrastructure for Cancer Prevention Information using School Health Classes
Norie Kawahara (noriekawahara@nifty.com)

Mini-Abstract

As a joint China-Japan research project, in China a questionnaire survey has been implemented through school pupils, with pupils and parents being asked about health classes implemented in schools. From the perspective of formulating strategy for establishing cancer on the global health agenda we will use the data gained from the surveys to analyze and examine the possibilities and significance of creating an infrastructure for a multilateral information network about cancer prevention.. Asian Pacific J Cancer Prev, 10, 1101-1106

Sida rhombifolia ssp. retusa Seed Extract Inhibits DEN Induced Murine Hepatic Preneoplasia and Carbon Tetrachloride Hepatotoxicity
Radhika Poojari, Sanjay Gupta, Girish Maru, Bharat Khade, Sanjay Bhagwat (drradhikapoojari@gmail.com)

Mini-Abstract

Inhibitory effects of S. rhombifolia ssp. retusa seed extract on DEN induced hepatocellular preneoplastic foci and carbon tetrachloride (CCl4) induced hepatotoxicity were investigated in rats. Histopathological and transmission electron microscopic studies showed prevention of cellular degenerative changes. Depleted glutathione, protein and albumin levels were restored. The chemopreventive and hepatoprotective potentials of seed extract appear due to free radical scavenging activity and restoration of cellular structural integrity. Asian Pacific J Cancer Prev, 10, 1107-1112

Impact of a Health Education Intervention Program Regarding Breast Self Examination by Women in a Semi-Urban Area of Madhya Pradesh, India
Sanjeev K Gupta, DK Pal, R Garg, R Tiwari, AK Shrivastava, M Bansal (drsanjeev15@gmail.com)

Mini-Abstract

The present study aimed to assess the impact of a health education intervention program about breast self examination (BSE) among women in a semi-urban area in Madhya Pradesh, India. An overall increase in the awareness of 43% and 53% of BSE practice was observed in the study group after intervention. Seven cases of breast disease were detected. The knowledge and practices of women toward breast self examination for early detection were observed to be inadequate in respondents but there was a significant improvement after the intervention. Asian Pacific J Cancer Prev, 10, 1113-1117
Clinical Evaluation of Parapelvic Renal Cysts: Do These Represent Latent Urological Malignant Disease?  
Yukihiro Umemoto, Takehiko Okamura, Hidetoshi Akita, Takahiro Yasui, Kenjiro Kohri  
(hiko2546@sf.commufa.jp)

Mini-Abstract

We here examined all parapelvic renal cyst patients who consulted our Department between April 1998 and December 2004 with the focus on potential for malignant development. Unless a parapelvic renal cyst causes pyelonephritis, symptomatic renal stones, or back discomfort, treatment is not indicated. However, the possibility that urological malignant disease may be encountered should be borne in mind and appropriate diagnostic measures should be performed. Furthermore, careful follow up of parapelvic renal cyst patients may be required.

Asian Pacific J Cancer Prev, 10, 1119-1120

Histopathological Patterns of Female Breast Lesions at a Secondary Level Care in Saudi Arabia  
Tarek Tawfik Amin, Abdul Rahman Saleh Al-Mulhim, Rajan Chopra  
(dramin55@gmail.com)

Mini-Abstract

The objective of this study was to characterize the histopathological patterns of female breast lesions encountered at a secondary level care centre in Al Hassa, Saudi Arabia, with special emphasis on multiplicity of benign lesions, their proliferative nature and level of risk for progression. Benign breast lesion multiplicity is frequent among Saudi female patients; with or without atypia these lesions represent a sizable risk of potential progression to breast cancer. Meticulous follow up with frequent screening may be useful for prevention.

Asian Pacific J Cancer Prev, 10, 1121-1126

Influence of Matrix Metalloproteinase Gene Polymorphisms in Healthy North Indians Compared to Variations in other Ethnic Groups Worldwide  
Priyanka Srivastava, Rakesh Kapoor, Rama Devi Mittal  
(ramamittal@yahoo.com)

Mini-Abstract

Several polymorphisms in matrix metalloproteinases have been implicated in the development of cancer as well as other diseases. Since their frequency distributions in the general North Indian population is not known the present study was conducted with the focus on MMP-1(-519) A>G, MMP-1(-1607) 1G>2G, and MMP-7(-181) A>G gene polymorphisms. Our results suggest that frequency in these MMP genes exhibit distinctive patterns in India that could perhaps be attributed to ethnic variation.

Asian Pacific J Cancer Prev, 10, 1127-1130

Oral Cancer Presentation Among Malay Patients in Hospital Universiti Sains Malaysia, Kelantan  
Asmani Abdul Razak, Norkhafizah Saddki, Nyi Nyi Naing, Nizam Abdullah  
(fizah@kb.usm.my)

Mini-Abstract

The objective of this study was to identify the characteristics of oral cancer among Malay patients in Hospital Universiti Sains Malaysia (HUSM), Kelantan. A retrospective record review was conducted from August to December 2006 in HUSM. Of 133 patients with oral cancer diagnosed from 1986 to 2005, 118 were Malay. The prevalence of oral cancer among Malay patients in HUSM is high. It is predominantly found in elderly males and the majority of cases present at advanced stage.

Asian Pacific J Cancer Prev, 10, 1131-1136
Induction of Apoptosis in the Human Leukemic U937 Cell Line by Kaempferia parviflora Wall.ex.Baker Extract and Effects of Paclitaxel and Camptothecin  Ratana Banjerdpongchai, Yupa Chanwikruy, Viboon Rattanapanone, Bungorn Sripanidkulchai

Mini-Abstract

Kaempferia parviflora Wall.ex.Baker is a Thai medicinal herb that has high antioxidant and anti-inflammatory activities. Apoptotic effects of the herbal extract alone and in combination with chemotherapeutic drugs, paclitaxel and camptothecin, were here studied in the human promonocytic leukemic U937 cell line. Mitochondrial transmembrane potential (MTP) decreased after treatment and the number of cells with decreased MTP also increased. Furthermore, activation of caspase-3 was found in herbal extract-treated cells.

Chemoprevention of 1,2-Dimethylhydrazine-Induced Colon Carcinogenesis by a Non-Steroidal Anti-Inflammatory Drug, Etoricoxib, in Rats: Inhibition of Nuclear Factor kB  Lalita Tanwar, Vivek Vaish, SN Sanyal

Mini-Abstract

Etoricoxib, a highly selective cyclooxygenase-2 (COX-2) inhibitor, was studied for chemopreventive response in the 1,2-dimethylhydrazine dihydrochloride (DMH) induced rat colon cancer model. The numbers of well characterized pre-neoplastic features such as multiple plaque lesions (MPLs), aberrant crypts (ACs) and aberrant crypt foci (ACF) were found to be reduced. Studies of a nuclear transcription factor (NF-kB) and COX-2 by Western blot analysis and immunohistochemistry demonstrated expression of both to be elevated in the DMH treated group but reduced in the DMH + Etoricoxib group.

Weekly Paclitaxel/ Docetaxel Combined with a Platinum in the Treatment of Advanced Non-Small Cell Lung Cancer: a Study on Efficacy, Safety and Pre-medication  Jian-Nong Zhou, Xin-En Huang, Zhuo Ye, Chao Li, Qian Zhang, Yong Lin, Wei Jiang, Wei-Li Sun, Mei-Qi Shi, Yong-Qian Shu

Mini-Abstract

The objective was to evaluate the efficacy and safety of a weekly taxane schedule in the treatment of advanced non small cell lung cancers (NSCLCs) and to generate anoptimal pre-medication protocol for weekly taxane. Toxicity wa limited and no treatment related deaths occurred. The results showed that weekly administration of paclitaxel /docetaxel is a safe and active protocol for advanced NSCLCs.

Pre-treatment Hemoglobin Levels are Important for Bladder Carcinoma Patients with Extravesical Extension undergoing Definitive Radiotherapy  Vuslat Yurut-Caloglu, Murat Caloglu, Mustafa Kaplan, Osman Inci

Mini-Abstract

This study waas performed to evaluate prognostic factors affecting local control (LC), distant metastases-free survival (DMFS) and overall survival (OS) in bladder carcinoma patients undergoing extravesical extension. The results showed the re-treatment Hb level to be the most important prognostic factor in patients treated with definitive radiotherapy, so that anemia may act as a surrogate biological marker for aggressive disease.
Histopathological Findings for Cervical Lesions in Malaysian Women
Al-Jashamy Karim, Redhwan Ahmed Al-Naggar, Poil San, M Mashani
(jashamy@yahoo.com)

Mini-Abstract
The objective of this study was to determine the histopathological features and cell morphology of various cervical lesions observed among Malaysian women. The histopathological results showed CIN I to be characterized by mild papillary projections of the epithelium with some degree of nuclear enlargement, pleomorphism, mild koilocytosis, binucleated cells and a low nucleo-cytoplasmic ratio. CIN II demonstrated typical squamous epithelium with disorganization of the lower part of the epithelium accompanied by nuclear hyperchromatism, an increased nucleo-cytoplasmic ratio, and scanty mitotic figures. CIN III was characterized by pleomorphic nuclei, atypical cells with mitotic figures, nucleo-cytoplasmic ratio, anisokaryosis and hyperchromasia.

Colorectal Cancer Patients in a Tertiary Referral Centre in Malaysia: a Five Year Follow-up Review
Mohd Radzniwan A Rashid, Aznida Firzah Abdul Aziz, Saharuddin Ahmad, Shamsul Azhar Shah, Ismail Sagap (drisagap@ppukm.ukm.my)

Mini-Abstract
In Malaysia, colorectal cancer (CRC) is fast becoming the commonest cause of cancer death. This study looked at the profile and outcome of five-year follow-up of patients with CRC. Male to female ratio was 1.2:1 with Chinese predominance. Almost half of the patients defaulted follow up care, most often within the first year of treatment (22.4%) and the Chinese were the least likely to default. Socio-demographic profile of CRC patients in UKMMC is comparable to Asia pacific region. Apparent delay in seeking treatment gives rise to poor overall survival and local recurrence rates.

Prevalence of Tobacco Use and Tobacco-dependent Cancers in Males in the Rural Cancer Registry Population at Barshi, India
Ranjit V Thorat, Nandkumar S Panse, Atul M Budukh, Ketayun A Dinshaw, Bhagwan M Nene, Kasturi Jayant (barshivac@rediffmail.com)

Mini-Abstract
In the Rural Cancer Registry at Barshi (western Maharashtra, India), it has been found that the incidence of cancer is relatively low. The aim was to explain the low incidence of tobacco related cancers in males on the basis of prevalence of their tobacco habits. Our findings suggest that the low incidence of smoking dependent cancers in males can be explained by the low prevalence of smoking habit but further studies are needed to explain the observed incidence of predominantly chewing dependent cancers.

Significance of Alanine Aminotransferase Testing in Diagnosis of Acute and Chronic HBV Infection
Ajay Kumar, Sanjay Pant, Sushil Narang (ajaykumarbiotech@rediffmail.com)

Mini-Abstract
Diagnosis of hepatitis is made by biochemical assessment of liver function. Alanine aminotransferase (ALT), a liver enzyme, is markedly elevated in hepatitis and with other causes of acute liver damage associated with hepatic necrosis, blood levels being elevated even before the clinical signs and symptoms of disease such as jaundice appear. In our study we found that 80% patients who were HBsAg positive had abnormal ALT levels, while the remaining 20% had normal ALT values. This is despite suffering from acute or chronic liver disease, providing a reason why some patients positive for hepatitis B have a normal ALT.
Identification of a Hepatitis B Virus Core Promoter Mutant by PCR- RFLP in Patients Suffering from Chronic Liver Disease, Uttar Pradesh, India  
Ajay Kumar, Balesh Kumar Tiwari, Ajay Kumar Chaudhary, Sanjay Pant Sushil Narang  
(ajaykumarbiotech@rediffmail.com)

Mini-Abstract

The present study was designed to identify a core promoter mutation in the HBV genome in patients suffering from HBV related chronic liver disease. The Sau3AI assay, which is much more convenient than sequencing, was shown to be useful for the detection of the core promoter mutant in an extensive number of clinical samples. Monitoring and detection of HBV variants by PCR-RFLP in chronic infection may improve the management of these patients.

Asian Pacific J Cancer Prev, 10, 1173-1175

Lack of Effects of Single Nucleotide Polymorphisms of the DNA Methyltransferase 1 Gene on Gastric Cancer in Iranian Patients: A Case Control Study  
Fatemeh Khatami, Babak Noorinayer, Somayeh Ghiasi, Reza Mohebi, Mohhamad Hashemi, Mohammad Reza Zali  
(sKhatami@rigld.ir)

Mini-Abstract

Hypomethylation and/or hypermethylation of DNA has been described in gastric cancer and is presumed to be an early event in carcinogenesis. We therefore hypothesized that single nucleotide polymorphisms of the DNMT1 gene may be associated with the genetic susceptibility to gastric cancer. However, we could not show any association between DNMT1 polymorphisms and gastric cancer. Larger sets of polymorphisms and sample sizes are required for future testing of possible associations.

Asian Pacific J Cancer Prev, 10, 1177-1182

Effects of Amino Acid Substitution Polymorphisms of two DNA Methyltransferases on Susceptibility to Sporadic Colorectal Cancer  
Fatemeh Khatami, Babak Noorinayer, Seyed Reza Mohebi, Somayeh Ghiasi, Mohhamad Hashemi, Mohammad Reza Zali  
(sKhatami@rigld.ir)

Mini-Abstract

The present study was designed to consider whether amino acid substitution polymorphisms in O6-methylguanine-DNA methyltransferase (MGMT) and DNA methyl transferase 1 (DNMT1) genes may be associated with the genetic susceptibility to sporadic colorectal cancer. The calculated odds ratios indicated no association for DNMT1. However, there was a significant association between two polymorphisms in MGMT with sporadic colorectal cancer.

Asian Pacific J Cancer Prev, 10, 1183-1188

Colostomy Irrigation: An Important Issue for Muslim Individuals  
Ayise Karadag, Zehra Göçmen Baykara  
(Zubaic.ahmad@aku.edu)

Mini-Abstract

Colostomy irrigation (CI) is a bowel management method in individuals with permanent colostomy, as an alternative to pouch use, which may provide continence. CI helps the individuals with an artificial stoma to adjust to the stoma and may increase their quality of life (QOL). An uncontrolled intestinal gas discharge invalidates ablution, and noisy gas discharge and smell prevents congregational prayers, which cause problems to Muslims with stomas. Therefore, CI may be an appropriate solution for this patient group. Using the example of one affected individual we discuss how the praying problem can be resolved with teaching to self-perform CI and emphasize the beneficial effects on QOL.

Asian Pacific J Cancer Prev, 10, 1189-1190
Mini-Abstract

Reliable population-based cancer survival data are essential for assessment of the effectivenes of cancer screening programs, distribution of cancer therapy and prevalent cancer cases. International comparisons are useful to allow societies, mass media and health authorities to gain a real appreciation of the cancer problem in their own country and provide an impetus to improve registration and cancer control planning. Since directly comparable survival data among East Asian countries are presently very limited, a comparative study on population-based cancer survival involving China, Indonesia, Japan, Korea, the Philippines and Taiwan, with Nepal as an observer, was proposed. At the 1st Working Group meeting in Tokyo on March 18th, 2009, it was decided to publish the present Commentary as a step towards realization of truly comparable cancer survival statistics in the region. Included are general information and quality of data of cancer registration at each participating registry and five-year relative survival rates of cancer of the stomach, colo-rectum, liver, lung, breast and cervix.

Asian Pacific J Cancer Prev, 10, 1191-1198

Notes
INFORMATION FOR AUTHORS

APJCP Editorial Office. The editorial offices are located in Thailand and Japan but submission is all electronic.

Types of Manuscript.

- Editorials
- Reviews/Mini-reviews
- Commentaries
- Policy and Practice Reports
- Research Communications
- Letters to the Editor

Peer Review.

Manuscripts submitted to the APJCP are reviewed by two or more authorities for significance and validity and comments are all supplied to the author. Advice as to acceptability will normally be supplied within one or two months.

Submission of Manuscripts.

Manuscripts can be submitted to Malcolm Moore at apocpcontrol@yahoo.com or any of the Subject Editors listed inside the front cover. There are no submission or page charges. Please send a Microsoft Word file for text and a Powerpoint file for figures. No hard copy is necessary except when a figure may be needed for scanning.

Conflict of Interest.

Information as to commercial or other links which might pose a conflict of interest should be provided. Funding sources can be acknowledged in the Acknowledgements.

Permission for Inclusion of Published Material.

The authors have full responsibility for obtaining permission for inclusion of previously published material in work submitted to the APJCP.

Organization of Manuscripts.

- Title page: Concise title, authors names and affiliations, address for correspondence, Fax number, Email address
- Abstract page: Concise abstract and key words
- Text pages: Arranged as appropriate for the type of manuscript
- References: In text cited as Yellow (2000), (Brown and Pink, 2000), (Black et al., 2000): NOT NUMBERED! Earliest first, then chronologically and alphabetically
- List: alphabetically then by year, all authors if up to five, three and et al for more.
- Illustrations: Should be of size and quality for direct downloading.

Proofs and Copyright.

Proofs will be sent as pdf files. Reprints can not be provided but the authors will be able to print out whatever copies they need from the final pdf file. They retain copyright other than that necessary for publication in the APJCP.

INFORMATION FOR ANY INTERESTED IN BECOMING APOCPC MEMBERS

The bimonthly electronic Asian Pacific Journal of Cancer Prevention (APJCP) is published by the Asian Pacific Organization for Cancer Prevention and Control with support from the UICC-Asian Regional Office for Cancer Control to promote increased awareness and knowledge in all areas of cancer prevention/control and to stimulate collaborative efforts and practical intervention approaches in the different countries and states of the Asian Pacific region. The journal is indexed on PubMed and Science Citation Index Expanded and free pdf files can be downloaded from our website www.apocp.org. There are no subscription charges and individual membership is free. If you wish to be be listed as a member and receive a quarterly pdf APJCP Contents and Mini-Abstracts please send an email with your details to Malcolm Moore.

The APOCPC is a non-profit concern. Any donations (listed in the yearly report) are used to support meetings and training courses to help achieve the aims of cancer prevention/control in the Asian Pacific region.
